

Mt. Roland Rivercare Catchment Inc.

Mount Roland Rivercare Catchment Inc (MRRCI) has recently completed a major project funded by the Australian Government, and is pleased to provide the attached reports on the project outcome. The Communities' Environment Program (CEP) Grant was received by MRRCI at the start of 2020.

Works under the program had three main focus areas.

- A weed control program, focusing on follow up control of known weed sites around Mount Roland, and also new works at recently identified foxglove sites around Kings Road and Gowrie Park.
- A program to monitor the presence of feral animals in areas around and inside the Mount Roland Regional Reserve, and
- Biodiversity surveys focusing on TasVeg Vegetation Condition Assessments around the Mount Roland area where present data was absent or incomplete.

Outcomes for each of these three main focus areas are summarized in the attached final reports.

MRRCI gratefully acknowledges the support and involvement of many stakeholders who each have contributed to making the overall program a notable success. MRRCI also recognizes and gratefully acknowledges the substantial voluntary commitments made by its members, and particularly by its Committee members.

Covid 19 was a major challenge for this project, resulting in ongoing difficulties with communication, implementation of work programs, and attendance at gatherings. It is a tribute to all concerned that all works were completed, and program goals exceeded.

Should you have any questions, or wish to comment on any element of these final reports, you are warmly invited to contact MRRCI at secretary@rivercare.org.au

Yours faithfully,

Robert Van Der Weide

President
